

Hitachi Australia introduces the T-19WX Interactive Display

SYDNEY, AUSTRALIA – September 28, 2009 – Hitachi Australia today announced an exciting new addition to its digital presentation solution range, the StarBoard T-19WX Interactive Display. A widescreen, pen driven, WXGA resolution 19-inch interactive tablet, the T-19WX works collaboratively with the Hitachi suite of presentation tools, enabling users to deliver presentations and write digital notes on the pen display, to be projected on a larger screen.

Ergonomically designed to increase usability, the T-19WX incorporates the latest interactive tablet technology, including eight customisable software shortcuts, a wireless pen with two customisable buttons, handwriting recognition capabilities, an adjustable tilt stand and VESA mount, and a VGA output connector. Its widescreen 16:10 aspect ratio was specifically developed for users requiring a larger workspace, designed to optimise images for widescreen projection.

“The T-19WX is perfect for schools and businesses looking for a simple and exciting presentation tool,” said James Burke, StarBoard Products Specialist, Hitachi Australia. “Those who desire the functionality of a full-size interactive whiteboard, but do not have the space or budget, now have an economical solution that will meet their needs.”

Hitachi StarBoard software can be easily accessed through the intuitive, icon-drive interface which allows presenters to operate in a whiteboard mode, or to annotate right over Windows applications or digital video on the display. The T-19WX includes collaboration software, allowing it to communicate seamlessly with other StarBoard systems, allowing simultaneous annotation and viewing, using multiple systems connected locally or via the internet.

The Hitachi StarBoard T-19WX Interactive Display is 46.2cm (H) x 34.8cm (W) x 6.1cm (D), features a writing resolution of 1000 Lpi and weighs approximately 5.4 kilograms.
