

Take presentations to a new level with the Hitachi WT-1 Interactive Wireless Tablet

SYDNEY, AUSTRALIA – October 22, 2009 – Hitachi Australia today launched the Hitachi StarBoard WT-1 Interactive Wireless Tablet, an innovative presentation solution for educators, presenters and businesses.

The Hitachi WT-1 Interactive Wireless Tablet provides presenters with a tool to create and deliver dynamic presentations. Up to seven WT-1 systems can be connected to a PC at any one time, enabling multiple users to interact and participate during presentations. Volume control is available directly from the tablet, and PowerPoint presentations can be fully controlled via the function button on the device.

The WT-1 comes with an interactive pen with two customisable buttons, has a wireless range of up to 9 metres and battery life which supports 16 hours of continuous use. The tablet also includes 16 shortcut function keys, handwriting recognition, search engine integration and a built-in LCD indicator screen to alert users when battery life is coming to an end.

“The Hitachi WT-1 Interactive Wireless Tablet is a great product for any classroom, training room, lecture hall or media conferencing centre,” said James Burke, StarBoard Products Specialist, Hitachi Australia. “The way we traditionally deliver

information has become stale and boring. With the WT-1 users are able to inject new life into their presentations, increasing interactivity when they are teaching or presenting to groups.”

The Hitachi StarBoard WT-1 Interactive Wireless Tablet is 27.6cm (H) x 28.1cm (W) x 2cm (D), weighs approximately 450 grams and has a writing resolution of 2000 Lpi.
